

Number – addition and subtraction

add numbers mentally with increasingly large numbers (e.g. $12\,462 - 2300 = 10\,162$)

Partition both numbers and recombine

$$\begin{aligned} 2358 + 773 \\ = 2000 + 300 + 50 + 8 + 700 + 70 + 3 \\ = 2000 + 1000 + 120 + 11 \\ = 3000 + 100 + 30 + 1 \\ = 3131 \end{aligned}$$

Partitioning with number lines

Partition second number only into hundreds, tens and ones and recombine

$$\begin{aligned} 2358 + 773 &= 2358 + 700 + 70 + 3 \\ &= 3058 + 70 + 3 \\ &= 3128 + 3 \\ &= 3131 \end{aligned}$$

Add the nearest multiple of 10 or 100, then adjust

$$458 + 79 = 458 + 80 - 1$$

subtract numbers mentally with increasingly large numbers (e.g. $12\,462 - 2300 = 10\,162$)

Subtract the nearest multiple of 10 or 100, then adjust

$$\begin{aligned} 458 - 79 &= 458 - 80 + 1 \\ &= 378 + 1 \\ &= 379 \end{aligned}$$

Find a difference by counting up

Use known number facts and place value to subtract (partition second number only)

$$\begin{aligned} 12\,462 - 2300 \\ = 12\,462 - 2000 - 300 \\ = 10\,462 - 300 \\ = 10\,162 \end{aligned}$$

Number – multiplication and division

multiply numbers mentally drawing upon known facts

Partition

$$\begin{aligned} 47 \times 6 &= (40 \times 6) + (7 \times 6) \\ &= (240) + (42) \\ &= 282 \end{aligned}$$

Double and halve

$$25 \times 16 = 50 \times 8 = 100 \times 4 = 200 \times 2 = 400$$

multiply whole numbers and those involving decimals by 10, 100 and 1000 Place Value

divide numbers mentally drawing upon known facts

Partitioning

$$\begin{aligned} 72 \div 3 &= (60 \div 3) + (12 \div 3) \\ &= 20 + 4 \\ &= 24 \end{aligned}$$

divide whole numbers and those involving decimals by 10, 100 and 1000 Place Value

identify multiples, (and use them to construct equivalence statements) e.g.

$$2 \times 2 \times 35 = 4 \times 35$$

$$3 \times 3 \times 9 \times 10 = 9^2 \times 10 = 3 \times 270$$

Use a variety of resources (including a calculator) to investigate multiples. Make models and images to display facts.

recall prime numbers up to 19

establish whether a number up to 100 is prime

Play games, chant, test etc to increase speed of recalling facts. Make models and images to display facts.

Investigate patterns within primes and use the 100 grid

recognise and use square numbers and cube numbers, and the notation for squared (2) and cubed (3)

Use a variety of resources (including a calculator) to investigate square and cubed numbers. Make models and images to display facts.

Investigate the patterns within squared and cubed numbers.

add numbers with more than 4 digits, including using formal written methods (columnar addition and subtraction – see Appendix 1)

Column addition

$$\begin{array}{r} 124.90 \\ + 117.25 \\ \hline 242.15 \end{array}$$

To ensure conceptual understanding, it is essential that place value is reinforced by frequently. Discuss the value of each digit. Use base 10 (Diennes) to support understanding of exchanging and to ensure conceptual understanding of place value. Where there is an 'empty' space in a decimal column, pupils should insert a zero to show the value. Children should be made aware that it is essential to align the columns carefully.

$$\begin{array}{r} 3.25 \\ + 4.13 \\ \hline 7.38 \end{array}$$

subtract numbers with more than 4 digits, including using formal written methods (columnar addition and subtraction – see Appendix 1)

Revision of **formal compact column method** extending to calculations involving numbers with more than 4 digits (use Diennes to support understanding of decomposition and place value).

When confident in using **formal compact column method** with integers and decimals involving money (always 2 decimal places), extend to subtraction with mixtures of integers and decimals. A clear understanding of place value is essential. Align the decimal point and use 'place holders', if needed.

$$\begin{array}{r} 263.0 \\ - 26.5 \\ \hline 236.5 \end{array}$$

Use Diennes or place value counters (add counters with 0.1) to support understanding of decomposition and place value.

multiply numbers up to 4 digits by a one- or two-digit number using a formal written method, including long multiplication for two-digit numbers

$$\begin{array}{r} 452 \\ \times 3 \\ \hline 1356 \end{array}$$

$$\begin{array}{r} 1243 \\ \times 8 \\ \hline 9944 \end{array}$$

Review formal method of short multiplication (for multiplying by one digit numbers) when proficient

Move onto formal long multiplication:

$$\begin{array}{r} 34 \\ \times 13 \\ \hline 102 \\ + 340 \\ \hline 442 \end{array}$$

divide numbers up to 4 digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context (as fractions, as decimals or by rounding (for example, $98 \div 4 = 98/4 = 24 \text{ r } 2 = 24 \frac{1}{2} = 24.5 \approx 25$))

Bus shelter method (short division)

$$\begin{array}{r} 86 \text{ r } 2 \\ 5 \overline{) 432} \\ \underline{40} \\ 32 \\ \underline{30} \\ 20 \end{array}$$

Pupils should consider whether remainders should be left as a remainder, rounded to the nearest whole or converted into a decimal or fraction.

Introduce long division (dividing by single digits)

$$256 \div 7 \text{ lies between } 210 \div 7 = 30 \text{ and } 280 \div 7 = 40$$

$$\begin{array}{r} 256 \\ - 70 \\ \hline 186 \\ - 140 \\ \hline 46 \\ - 42 \\ \hline 4 \end{array}$$

Answer: 36 remainder 4

Number – addition and subtraction

Number – multiplication and division

solve addition multi-step problems in contexts, deciding which operations and methods to use and why

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

solve subtraction multi-step problems in contexts, deciding which operations and methods to use and why

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy

Estimate answers before solving any calculation. Check against estimate after calculating (and use inverse check).

use a variety of language to describe addition

+ add, addition, more, plus, increase, sum, total, altogether, score, double, near double, how many more to make...? tens boundary, hundreds boundary, units boundary, tenths boundary, inverse

= equals, sign, is the same as

use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy

Estimate answers before solving any calculation. Check against estimate after calculating (and use inverse check).

use a variety of language to describe subtraction

- subtract, subtraction, take (away), minus, decrease, leave, how many are left/left over? difference between, half, halve, how many more/fewer is... than...? how much more/less is...? tens boundary, hundreds boundary, units boundary, tenths boundary, inverse

= equals, sign, is the same as

Solve problems that use multiplication and division as inverses, for example, by multiplying and dividing by powers of 10 in scale drawings or by multiplying and dividing by powers of a 1000 in converting between units such as kilometres and metres

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

use and explain the equals sign to indicate equivalence, including missing number problems (e.g. $13+24 = 12+25$; $33 = 5 \times []$)
express distributivity, for example as $a(b + c) = ab + ac$

Use all of the models and images above to investigate a range of statements, ensuring the equals sign is in different positions. Allow time for discussion and reasoning. Display solutions and reasoning. Also use errors or misconceptions as a starting point.

use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy

Estimate answers before solving any calculation. Check against estimate after calculating (and use inverse check).

use a variety of language to describe multiplication

know and use the vocabulary of prime numbers, prime factors and composite (nonprime) numbers

lots of, groups of, times, multiply, multiplication, multiplied by, multiple of, product, once, twice, three times... ten times... times as (big, long, wide... and so on), repeated addition, array, row, column, double, inverse, prime,

equals, sign, is the same as

Solve problems that use multiplication and division as inverses, for example, by multiplying and dividing by powers of 10 in scale drawings or by multiplying and dividing by powers of a 1000 in converting between units such as kilometres and metres

Use all the models and images mentioned above. Discuss which is most effective and why.

Singapore Bar Method

use and explain the equals sign to indicate equivalence, including missing number problems (e.g. $13+24 = 12+25$; $33 = 5 \times []$)

Use all of the models and images above to investigate a range of statements, ensuring the equals sign is in different positions. Allow time for discussion and reasoning. Display solutions and reasoning. Also use errors or misconceptions as a starting point.

use rounding to check answers to calculations and determine, in the context of a problem, levels of accuracy

Estimate answers before solving any calculation. Check against estimate after calculating (and use inverse check).

use a variety of language to describe division

Array, row, column, half, share, share equally one each, two each, three each... group in pairs, threes... tens, equal groups of, divide, division, divided by, divided into, remainder, factor, quotient, divisible by, inverse. Prime, factors

equals, sign, is the same as
